Challenge-4

Deng Chunxi 2023-09-06

Questions

Load the "CommQuest2023.csv" dataset using the read_csv() command and assign it to a variable named "comm_data."

```
# Enter code here
library(tidyverse)
```

```
## - Attaching core tidyverse packages -
                                                            - tidyverse 2.0.0 —
## ✓ dplyr 1.1.2
                    ✓ readr
                                 2.1.4
## ✓ forcats 1.0.0

✓ stringr

                                  1.5.0
## ✓ ggplot2 3.4.3

✓ tibble 3.2.1

## ✓ lubridate 1.9.2

✓ tidyr

                                  1.3.0
## ✓ purrr 1.0.2
## — Conflicts —
                                                 ---- tidyverse_conflicts() ---
## * dplyr::filter() masks stats::filter()
## * dplyr::lag() masks stats::lag()
## i Use the conflicted package (<http://conflicted.r-lib.org/>) to force all conflic
ts to become errors
```

```
comm_data <- read_csv("CommQuest2023_Larger.csv")</pre>
```

```
## Rows: 1000 Columns: 5
## — Column specification
## Delimiter: ","
## chr (3): channel, sender, message
## dbl (1): sentiment
## date (1): date
##
## i Use `spec()` to retrieve the full column specification for this data.
## i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

Question-1: Communication Chronicles

Using the select command, create a new dataframe containing only the "date," "channel," and "message" columns from the "comm_data" dataset.

```
# Enter code here
select(comm_data, date, channel, message)
```

```
## # A tibble: 1,000 \times 3
##
             channel message
     date
##
     <date> <chr>
                       <chr>
##
   1 2023-08-11 Twitter Fun weekend!
##
   2 2023-08-11 Email Hello everyone!
   3 2023-08-11 Slack Hello everyone!
   4 2023-08-18 Email Fun weekend!
   5 2023-08-14 Slack Need assistance
   6 2023-08-04 Email Need assistance
   7 2023-08-10 Twitter Hello everyone!
  8 2023-08-04 Slack Hello everyone!
## 9 2023-08-20 Email
                        Team meeting
## 10 2023-08-09 Slack
                        Hello everyone!
## # i 990 more rows
```

Question-2: Channel Selection

Use the filter command to create a new dataframe that includes messages sent through the "Twitter" channel on August 2nd.

Solution:

```
# Enter code here
comm_data %>%
filter(date == "2023-08-02", channel == "Twitter") %>%
  select(date, channel, message)
```

```
## # A tibble: 15 × 3
      date
##
                channel message
##
      <date>
                 <chr>
                         <chr>
##

```

Question-3: Chronological Order

Utilizing the arrange command, arrange the "comm_data" dataframe in ascending order based on the "date" column.

```
# Enter code here
arrange(comm_data,date)
```

```
## # A tibble: 1,000 × 5
##
     date
               channel sender
                                    message
                                                    sentiment
##
               <chr> <chr>
     <date>
                                                        <dbl>
                                     <chr>
## 1 2023-08-01 Twitter alice@example Need assistance

## # i 990 more rows
```

Question-4: Distinct Discovery

Apply the distinct command to find the unique senders in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data %>%
distinct(
sender)
```

```
## # A tibble: 6 × 1
## sender
## <chr>
## 1 dave@example
## 2 @bob_tweets
## 3 @frank_chat
## 4 @erin_tweets
## 5 alice@example
## 6 carol_slack
```

Question-5: Sender Stats

Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the "comm_data" dataframe.

```
# Enter code here
comm_data %>%
  group_by(sender) %>%
  summarise(count = n())
```

```
## # A tibble: 6 × 2
##
    sender
                  count
##
    <chr>
                  <int>
## 1 @bob_tweets
                  179
## 2 @erin_tweets
                    171
## 3 @frank_chat
                    174
## 4 alice@example 180
## 5 carol slack
                    141
## 6 dave@example
                    155
```

Question-6: Channel Chatter Insights

Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data %>%
  group_by(channel) %>%
  summarise(count = n())
```

```
## # A tibble: 3 × 2
## channel count
## <chr> <int>
## 1 Email 331
## 2 Slack 320
## 3 Twitter 349
```

Question-7: Positive Pioneers

Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

```
# Enter code here
comm_data %>%
  filter(sentiment > 0) %>%
  group_by(sender) %>%
  summarise(mean(sentiment)) %>%
  slice(6,3,4)
```

Question-8: Message Mood Over Time

With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data %>%
  group_by(date) %>%
  summarise(average_sentiment = mean(sentiment))
```

```
## # A tibble: 20 × 2
##
      date
                 average_sentiment

Question-9: Selective Sentiments

Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

```
# Enter code here
comm_data %>%
  filter(sentiment < 0) %>%
  select(message, sentiment) %>%
  arrange(sentiment)
```

```
## # A tibble: 487 × 2
                   sentiment
##
     message
##
     <chr>
                        <dbl>

Question-10: Enhancing Engagement

Apply the mutate command to add a new column to the "comm_data" dataframe, representing a sentiment label: "Positive," "Neutral," or "Negative," based on the sentiment score.

Solution:

```
# Enter code here
comm_data %>%
  mutate(sentiment_label = ifelse(comm_data$sentiment > 0, "positive", ifelse(comm_data$sentiment == 0, "neutral", "negative")))
```

```
## # A tibble: 1,000 × 6
##
     date
              channel sender
                                                    sentiment sentiment_label
                                     message
##
     <date>
                <chr>
                        <chr>
                                     <chr>
                                                        <dbl> <chr>
                                                        0.824 positive

Question-11: Message Impact

Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

```
# Enter code here
comm_data %>%
mutate(product = sentiment * nchar(message)) %>%
arrange(desc(product))
```

```
## # A tibble: 1,000 × 6
##
     date
               channel sender
                                     message
                                                     sentiment product

Question-12: Daily Message Challenge

Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the "comm_data" dataframe.

```
# Enter code here
comm_data %>%
  group_by(date) %>%
  mutate(number_of_character = nchar(message)) %>%
  summarise(count = n())
```

```
## # A tibble: 20 × 2
##
      date
                 count
##
      <date>
                  <int>

Question-13: Untidy data

Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: 1. Numbers in the variables are not in ascending/descending order. 2. Under the percent column, it has included an observation, population 16 years and over. But the data is not stored in percentage.

Use the arrange function and start every new command in a new line.
